Firetide Wireless Infrastructure Mesh Solutions for Transportation and Mobility

With many successful deployments and years of mobility experience, Firetide is the world's leader in extending high speed network infrastructures onboard fast moving trains, subways, buses, and public safety vehicles. Operating at sustained speeds up to 90 mph, our patented and award-winning mesh and mobility technologies provide the only proven solutions currently in use for delivering fiber-quality bandwidth for multiple high-definition video streams and seamless roaming across extended distances.

Linear mobility

- Optimized for maximum performance for video, Wi-Fi, and communications on fixed-path rail systems
- Intelligent, self-learning algorithms provide seamless roaming spanning multiple wireless mesh networks

Free roaming mobility

- Ideal for use with public safety and security vehicles in cities, seaports and airports, and housing districts
- Enables police vehicles to connect to moving buses and streetcars to monitor live onboard video feeds during crisis situations

Video and data offload

- Fully automated wireless offloading of recorded video when a vehicle pulls into a depot or station
